(54) VIRUS ENVELOPE VECTOR FOR GENE TRANSFER

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain a safe and stable gene transfer vector capable of gene transfer into a wide range of intracorporeal tissues, thus having high gene transfer activity, using a virus envelope.

SOLUTION: This gene transfer vector is prepared by transferring an extraneous gene into a virus envelope through freeze-thaw treatment or mixing with a surfactant. Pharmaceutical compositions each containing the above vector and intended for gene therapies, kits each containing the above vector, and a method for gene transfer using the above vector, are also provided.

LEGAL STATUS

[Date of request for examination] 18.10.2006

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
